Full-stack software engineer with backend developer experience in omnichannel platforms, e-commerce, and web products. Proficient in JavaScript, Node.js, Express.js, Python, Google Cloud, Firebase, Firestore, Kubernetes, MongoDB, software architecture, automated testing, and CI/CD. Capable of designing and deploying scalable products using agile methodologies and version control.

Education

Universidad Surcolombiana

August 2020 — June 2025

Bachelor's Degree in Software Engineering

SENA

February 2018 — January 2020

Technologist Degree in Multimedia Production

Experience

Backend Developer

December 2025 — Present

Piyion

- Developed backend services with Python for omnichannel chat center features
- Developed and maintained frontend interfaces with React and JavaScript for platform features
- Integrated and managed data using Firebase and Firestore
- Worked with Google Cloud services and Kubernetes-based deployments
- Implemented automated tests with Pytest to improve backend reliability

Freelance Web Developer

July 2025 — August 2025

Distri Marcas SJG

- Configuration and integration of WooCommerce
- Implementation of wholesale catalog with price rules and advanced categories
- Performance optimization (caching, images, minification)
- Integration of payment gateway and automatic transactional emails

Projects

Edificio Cardamomo

June 2026 — August 2026

Responsive website and direct booking system for Edificio Cardamomo's serviced apartments in Neiva. It presents the apartments, supports availability lookup and direct reservations, and synchronizes iCal calendars with Booking.com and Airbnb.

- Built a responsive full-stack web experience for browsing apartments and booking directly
- Implemented authentication with Firebase Authentication and stored reservations and availability in Cloud Firestore
- Scheduled availability synchronization from Booking.com and Airbnb iCal calendars with Cloud Scheduler
- Deployed the website to Firebase Hosting and the backend to Google Cloud Run

Ascuita

December 2025 — May 2026

Voice agent companion designed as a personal conversational assistant for voice-based interaction on the web.

- Built a web experience focused on voice interaction
- Designed conversational flows for personal assistance
- Deployed the public web application with Firebase Hosting

Horarios App

July 2023 — July 2025

Schedule combination generator that automates the creation of optimal, conflict-free schedules.

- Full-stack development with Vanilla JavaScript, Node.js, and Express
- Automatic generation algorithm for all viable schedule combinations
- Intelligent detection of schedule conflicts between events
- Interactive and responsive interface to visualize and compare multiple options

Print Nelsy

August 2024 — July 2025

Image organizer for printing, offering manual or automatic sorting of images into grids or collages.

- Advanced image manipulation with Fabric.js
- Intuitive and accessible interface
- Printing optimization (collages, grids, different paper sizes)

Distri Marcas SJG

July 2025 — August 2025

Wholesale e-commerce platform with B2B catalog, inventory management, and secure payments.

- Development with WordPress and WooCommerce
- Performance optimization
- Inventory management
- Payment gateway integration

Certificates

Diploma in Programming Fundamentals in Python Language

July 2022

Ministry of ICT

Diploma in Basic Programming in Java Language

September 2022

Ministry of ICT

Diploma in Mobile Application Development

December 2022

Ministry of ICT

Scrum Fundamentals Certified

May 2022

Development of a Model for Detection and Classification of Diseases in Tomato Plants Using Swin Transformer Architecture

November 2023

Research Square

This research focuses on developing a model for the detection and classification of diseases in tomato plants using the Swin Transformer architecture. The model aims to surpass the accuracy limitations of current Convolutional Neural Networks (CNN) methods. The study involves constructing a balanced dataset for various tomato plant diseases, evaluating the model's predictions, and comparing its accuracy with CNN-based models.

Languages

Spanish: Native

English: Intermediate

Skills

Frontend: HTML, CSS, JavaScript, React

Backend: Node.js, Express, Python

Documentation: Swagger

Databases: PostgreSQL, MongoDB, Firestore

Testing: Jest, Pytest

CI/CD: GitHub Actions, Kubernetes

Version Control: Git, GitHub

Cloud & BaaS: Google Cloud, Firebase

E-commerce & CMS: WordPress, WooCommerce
